## PROFESSIONAL EXPERIENCE

### **Student Developer**

Ottawa, ON

**Canada Revenue Agency**

SEP. 2023 - AUG 2024

- Revamped old TypeScript and HTML components using Angular-Material, increasing the usability of Webform Factory and advancing the government's variety of technologies.
- Developed full stack services and pages using Angular, TypeScript, SQL and Java.
- Tested and maintained angular components using Jasmine, Karma, and TypeScript, decreasing unit-testing time by 10% while working part-time.

### **Logistics Team Leader**

Ottawa, ON

**uOttaHack VII**

APR 2024 - PRESENT

- Assigned and coordinated team members to complete logistical tasks while aiding them with their questions.
- Communicated with University administration and uOttaHack co-directors to secure a venue for the next hackathon.

### **Community Team Coordinator**

Ottawa, ON

**uOttaHack VI**

OCT 2023 - MAR 2024

- Organised and coordinated tech and school-based events for the uOttaHack community, attracting more than **300 participants** in the last year.
- Coordinated a study session on Computer Architecture, resulting in a turnover of more than **100 students**.
- Assisted in the coordination of uOttaHack VI, a yearly hackathon offering several networking and learning opportunities amassing **650 participants** all across Ontario.

## PROJECTS

**MenuMate – (HTML | CSS | JavaScript | Python | React | Flask | Co:Here NLP)**

JAN 2023

**McHacks X Submission**

- Web application suggesting restaurant options in the city of Ottawa depending on the user's input.
- Utilised Co:Here's API and data scraping techniques to find and output a list of food suggestions depending on the user's preference.
- Fully designed, created, and implemented the web application's front end and its conceptualization using CSS and HTML, JavaScript and Figma.

**Health App Management System – (Java | XML)**

SEP 2023

**Full Stack App**

- Developed a full-stack management app to manage client and doctor-side appointments through services.
- Designed and Implemented a functional and stylised user interface using **Android Studio and XML**.
- Integrated responsive back-end features allowing the app to notify users through a **java-email base** and to change the user's app preferences through various connections to the **firestore database**.

**Hotel Reservation App – (HTML | CSS | JavaScript | SQL | React | Express.js)**

APR 2024

**Full Stack App**

- Developed a full-stack website offering services to manage hotels based on residency and accommodations.
- Implemented fully designed pages using **HTML, CSS, and JavaScript** for both clients and admins to display various hotels and users.
- Developed a back end using **Express.js and Node.js** to display, update, and delete the requested information from the app's database.
