EDUCATION

University of Ottawa

Bachelor of Science, Computer Science Honors (3.70/4.00 GPA)

Ottawa, ON

Sep. 2022 - Apr. 2027

- **Activities:** Logistics Team Leader : **uOttHack VII**, Community Coordinator : **uOttHack VI**.

WORK EXPERIENCE

Full-Stack Developer Intern

Magnet Forensics

Ottawa, ON

September 2025 - Present

- Integrated backend components and services for Magnet Forensics' AXIOM PROCESS Chat-Threading feature by parsing RSMF files in **C#**, enabling structured extraction and analysis of chat data.
- Extended Magnet Forensics' MFT parsing pipeline with backlogging in **C#**, enabling deferred processing and recovery of files that previously failed or were dropped during analysis runs.
- Used **C#** and **Claude Code** to investigate ZIP vs. in-house AFF4-L compression performance by designing benchmark tests across various test cases, identifying a file corruption bug that slowed AFF4-L compression by **75%**, and contributing to optimizations that improved compression speed by **23%**.
- Built a three-stage LLM-driven dev workflow (plan → implement → review) using **Claude Code** and **Python**, cutting per-ticket implementation time by **15%** through automated scoping and code review.
- Cleared legacy backlog tickets in parallel with sprint-critical deliverables, reducing outstanding non-MVP workload by **20%** without sacrificing team velocity.

Full-Stack Developer Intern

University of Ottawa

Ottawa, ON

January 2025 - April 2025

- Migrated legacy API services to a modern stack and built mobile app components using **React Native**, **React Redux**, **Axios**, and **TypeScript**, shipping features used by **3,000+** co-op students and administrators.
- Designed and implemented RESTful APIs using **ASP.NET Core**, defining endpoint architecture and data contracts to support scalable feature development across mobile and web clients.
- Rebuilt the uOttawa co-op employer directory in **MudBlazor** and **C#**, replacing static filters with dynamic multi-field sorting and keyword autocomplete, directly reducing time-to-find for **3,000+** student users.

Software Engineering Intern

Canada Revenue Agency

Ottawa, ON

September 2023 - August 2024

- Built **WCAG 2.1**-compliant UI components for the Government of Canada's shared **Angular Material** component library, modernizing front-end infrastructure used across multiple federal web systems.
- Developed full-stack features in **Angular** and **TypeScript** (frontend) and **Spring Boot** and **Java** (backend) with **SQL** data access, contributing to government-facing applications serving Canadian taxpayers.
- Streamlined testing workflows by implementing black-box testing strategies with **Jasmine.js**, **Karma.js**, and **TypeScript**, reducing unit test execution time by **10%** and improving maintainability of government websites and components.

PROJECTS

🌀 Dejavu - (React | JavaScript | HTML | CSS | Express.js | Supabase | Render | Stripe.js)

Production e-commerce platform with live payment processing

- Built a full-stack e-commerce SPA using **React**, **Vite**, **Node.js**, and **Express.js**, featuring a dynamic product catalog, scroll-anchored editorial lookbook pages, a global cart, and vanilla CSS styling throughout.
- Integrated **Stripe** Checkout and webhooks for end-to-end payment processing, with server-side stock validation against **Supabase/PostgreSQL**, idempotent order creation on checkout.session.completed events, and automatic per-variant inventory decrement on confirmed payment.
- Implemented JWT authentication and role-based access control using **bcrypt** and **jsonwebtoken**, securing admin routes with a verifyToken/requireAdmin middleware chain to automatically link guest orders to newly registered accounts by email on signup.
- Architected a variant-aware **PostgreSQL** schema (products → variants → inventory) with transactional per-SKU stock decrement at checkout, preventing overselling under concurrent orders.

SKILLS

Programming Languages: Python, Java, HTML, CSS, JavaScript, TypeScript, Go, SQL, C#, C++

Frameworks: Angular, Jasmine, Karma, Node.js, Vite, Maven, React.js, React Native, Express.js, Spring Boot, React Redux, Redux Saga, Entity Framework, Axios, MudBlazor

Developer Tools: Git, GitHub, Jenkins, PostgreSQL, Postman, JIRA, Docker, Kubernetes, Supabase, Render, Claude Code, Microsoft Azure, AWS, Linux
